	<p>least two coaxial ring-shaped elements (2, 3, 4) connected by arms (5, 6) of which the end portions extend laterally relative to said ring-shaped elements and are hinged thereon by means of deformable hinge pins (11, 19) extending radially; said ring-shaped elements (2, 3, 4) can be moved coaxially relative to one another between a retracted position (figure 2) in which said ring-shaped elements are arranged around and at a distance from each other and said arms extend therebetween, and an extended position in which said ring-shaped elements are spaced apart and, at the same time, the orientation of said arms changes and the ring-shaped elements turn relative to one another; wherein said arms (5, 6) and said ring-shaped elements (2, 3, 4) include reciprocal holding means (8, 9, 10, 18, 20; see also column 1, lines 39 to 41, and claims 9 and 10), which in turn include projecting fingers (9, 10, 20) located alongside and at a distance from said hinge pins (11, 19) such that they are mutually vertically adjacent (figure 4) when said ring-shaped elements and said arms are moved to the above-mentioned extended position and mutually engage thereby holding said ring-shaped elements and said arms in said extended position.</p> <p>3.       DEPENDENT CLAIMS 2, 3 and 5</p> <p>Said claims contain no features which, when combined with the features of any one of the claims to which they refer, meet the PCT</p>

	<p>requirements of novelty (PCT Article 33(2); see figures 2, 3 and 4 of D1).</p> <p>4.      DEPENDENT CLAIMS 4 and 6</p> <p>The combination of the features of claims is not found in the prior art and cannot be derived in an obvious manner therefrom for the following reasons:</p> <p>With respect to claim 4, none of the prior art documents considered describes projecting fingers provided respectively with hollow and projecting portions forming hooks that radially engage in the extended position. The problem solved by these features (strengthening the structure of the container) is not even expressed in D1.</p> <p>With respect to claim 6, D4 describes an appendage 24 of which the end is provided with a fastening fork 25. However, said appendage is attached to an arm that does not fold and is much simpler than the one in D1. It would therefore not be obvious for a person skilled in the art to combine this feature with the folding arm described in D1.</p>
